CLAIMS

1. A wireless communication system configured from a wireless base station and a wireless communication terminal, wherein a wireless communication line is set between the wireless base station and the wireless communication terminal,

the wireless base station comprises:

15

20

a wireless base station transmission rate broadcast section that notifies the wireless communication terminal of a transmission rate that enables to be supported by the wireless base station on the wireless communication line from the wireless communication terminal to the wireless base station, and

the wireless communication terminal comprises:

- a storage section that stores a transmission rate required by the wireless communication terminal on the wireless communication line from the wireless communication terminal to the wireless base station; and
- a transmission rate determination section that determines a transmission rate on the wireless communication line from the wireless communication terminal to the wireless base station based on a result of comparing the transmission rate notified from the wireless base station with the transmission rate stored in the storage

section.

2. A wireless communication system configured from a wireless base station and a wireless communication terminal, wherein a wireless communication line is set between the wireless base station and the wireless communication terminal,

the wireless communication terminal comprises:

- a terminal transmission rate broadcast section that

 notifies the wireless base station of a transmission rate
 required by the wireless communication terminal on the
 wireless communication line from the wireless communication
 terminal to the wireless base station when the wireless
 base station and the wireless communication terminal
 exchange their mutual state information; and
 - a transmission rate determination section that determines a transmission rate on the wireless communication line from the wireless communication terminal to the wireless base station, and

20 the wireless base station comprises:

- a determination section that determines whether or not the transmission rate notified from the wireless communication terminal enables to be supported; and
- a determination result broadcast section that 25 notifies the wireless communication terminal of a

determination result of the determination section,

wherein the transmission rate determination section determines the transmission rate on the wireless communication line from the wireless communication terminal to the wireless base station based on the determination result notified from the wireless base station.

- 3. The wireless communication system according to claim 2.
- wherein the wireless communication terminal notifies
 the wireless base station of the transmission rate required
 by the wireless communication terminal on the wireless
 communication line from the wireless communication terminal
 to the wireless base station when power of the wireless
 communication terminal is turned on, and determines the
 transmission rate on the wireless communication line from
 the wireless communication terminal to the wireless base
 station based on the determination result notified from the
 wireless base station.

20

25

4. The wireless communication system according to claim 2 or 3,

wherein the terminal transmission rate broadcast section notifies the wireless base station of a state information request message including the transmission rate

required by the wireless communication terminal on the wireless communication line from the wireless communication terminal to the wireless base station.

5 5. The wireless communication system according to any one of claims 2 to 4,

wherein the wireless communication terminal comprises a request transmission rate transmission section that retransmits a request of a transmission rate lower than the transmission rate required by the wireless communication terminal when the determination result from the wireless base station section shows that the transmission rate does not enable to be supported.

10

20

25

- 15 6. A wireless communication terminal, wherein a wireless communication line is set between a wireless base station and the wireless communication terminal, comprising:
 - a storage section that stores a transmission rate required by the wireless communication terminal on the wireless communication line from the wireless communication terminal to the wireless base station;
 - a transmission rate information acquisition section that receives a transmission rate that enables to be supported by the wireless base station on the wireless communication line from the wireless communication terminal

to the wireless base station, notified from the wireless base station;

- a transmission rate comparison section that compares
 the transmission rate notified from the wireless base
 station with the transmission rate stored in the storage
 section; and
- a transmission rate determination section that determines a transmission rate on the wireless communication line from the wireless communication terminal to the wireless base station based on a comparison result of the transmission rate comparison section.
 - 7. A wireless communication terminal, wherein a wireless communication line set between a wireless base station and the wireless communication terminal, comprising:
 - a terminal transmission rate broadcast section that notifies the wireless base station of a transmission rate required by the wireless communication terminal on the wireless communication line from the wireless communication terminal to the wireless base station when the wireless base station and the wireless communication terminal exchange their mutual state information; and

20

25

a transmission rate determination section that determines a transmission rate on the wireless communication line from the wireless communication terminal

to the wireless base station based on a determination result as to whether or not the wireless base station enables to support the transmission rate notified from the wireless communication terminal.

5

. 25

8. The wireless communication terminal according to claim 7,

wherein when power of the wireless communication terminal is turned on,

- the wireless communication terminal notifies the wireless base station of the transmission rate required by the wireless communication terminal on the wireless communication line from the wireless communication terminal to the wireless base station, and
- determines the transmission rate on the wireless communication line from the wireless communication terminal to the wireless base station based on the determination result notified from the wireless base station.
- 20 9. The wireless communication terminal according to claim 7 or 8,

wherein the terminal transmission rate broadcast section notifies the wireless base station of a state information request message including the transmission rate required by the wireless communication terminal on the

wireless communication line from the wireless communication terminal to the wireless base station.

- 10. The wireless communication terminal according to any one of claims 7 to 9, comprising:
- a request transmission rate transmission section that retransmits a request of a transmission rate lower than the transmission rate required by the wireless communication terminal when the determination result from the wireless base station section shows that the transmission rate does not enable to be supported.
 - 11. A wireless base station, wherein a wireless communication line is set between the wireless base station and a wireless communication terminal, for performing communications, comprising:

15

20

a wireless base station transmission rate broadcast section that notifies the wireless communication terminal of a transmission rate that enables to be supported by the wireless base station on the wireless communication line from the wireless communication terminal to the wireless base station.
